Data
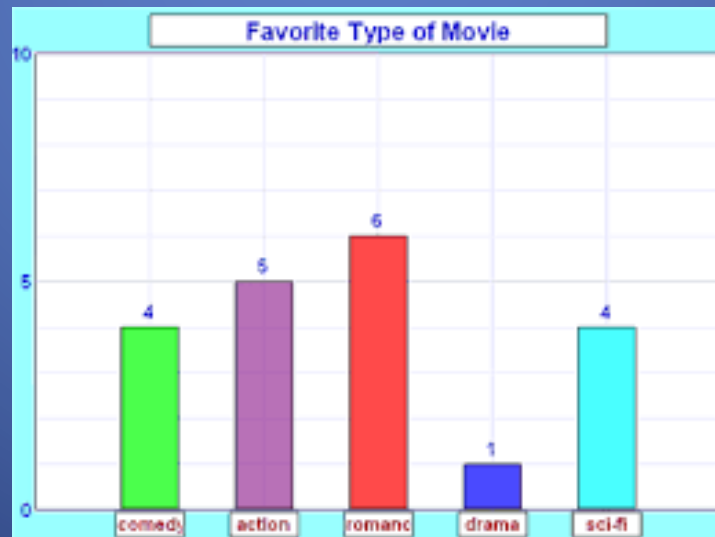

What is data?

Data is facts or statics collected for reference or analysis used to gain knowledge. Data is also the plural or 'Datum'.
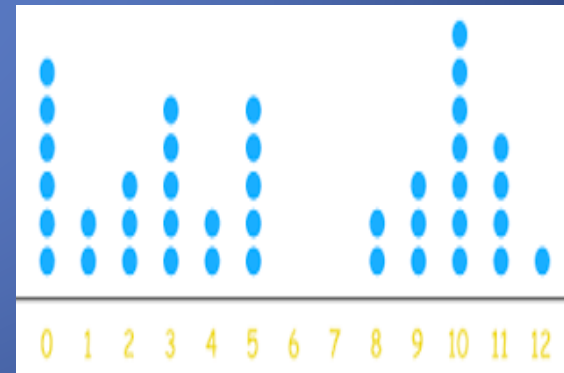

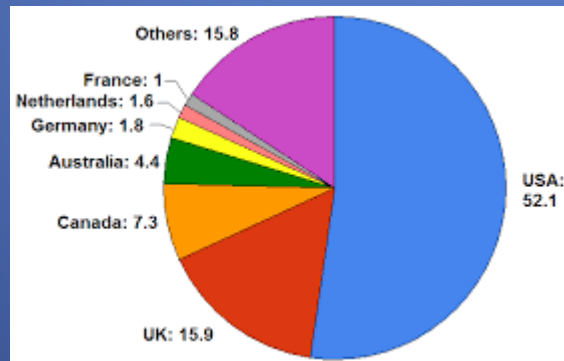

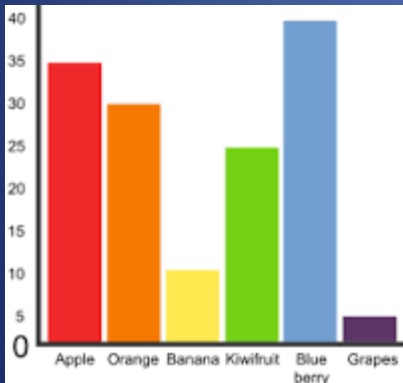

Who uses data?

Everyone can use data, from a simple survey of their friends to a survey of the entire school. We can all use data for our own use. Data is simply just a collection of information that we can use.

What different types of data display are there

There are various ways we can display data including; making tables, charts, bar graphs, line graphs, pictographs, circle graphs, and dot plots. Examples:

Why do we use data

Data makes it easier for us to organise information that we have collected and we can ask others about their opinion on a topic.

Thank you for listening (if you were)
